DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed evaluation chart is a printed matter.

MPEP, chapter 706.03(a) [R-5], states a mere arrangement of printed matter, though seemingly a "manufacture," is rejected as not being within the statutory classes. See *In re Miller*, 418 F.2d 1392, 164 USPQ 46 (CCPA 1969); *Ex parte Gwinn*, 112 USPQ 439 (Bd. App. 1955); and *In re Jones*, 373 F.2d 1007, 153 USPQ 77 (CCPA 1967).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyagawa et al., Japanese patent application publication No. 2000-224615.

Regarding claims 1-21, Miyagawa discloses an image evaluation chart in Figure 3 showing all the features of the invention except the regular-squared outer line located at outside of the center point as claimed. Instead, the Miyagawa shows a circle.

Despite the difference, they both have the same effect on a display device when being

used as an evaluation chart. The difference is strictly considered as an obvious design choice. Hence, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to redraw the test chart of Figure 3 so that it could have the similar look as claimed. In addition, Miyagawa does not specify the balance measurement lines as claimed. The examiner takes Official Notice that using balance measurement lines for evaluation a display device is well known in the art because it is one of the basic testing patterns. To further enhance the test chart of Miyagawa, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to redraw the test chart of Figure 3 so that the basic balance measurement lines could be included into the Miyagawa.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schroeder et al. (2004/0212680) shows an evaluation chart.

Albertelli (6,992,696) shows a resolution test target.
